

Kinder Haven Nursery

The customer

Kinder Haven Ltd is a privately owned family business established in 2002. The company has been providing quality childcare and learning opportunities for children aged 0-5 years across five sites in Yorkshire ever since. The Kinder Haven team is passionate about creating stimulating, carefully structured play environments where children can flourish and achieve.

The challenge

To ensure the safety and protection of all children, Kinder Haven operates a number of high security systems. They include door entry intercom devices, CCTV monitoring on internal playrooms and external play areas; secure door entry key devices ensure safe access and high levels of security at every site.

Kinder Haven Nursery

The solution

Each Kinder Haven building is unique, and so we designed bespoke, comprehensive security systems for each site to keep the children safe and secure. We sourced state of the art solutions to create an integrated approach to security across all five sites.

This included:

- Secure access control technology designed with children in mind
- IP CCTV system with off-site monitoring
- Out of hours response for all sites

The future

We constantly monitor the sites to review the security procedures and look at new ways to maintain and improve security measures to safeguard the children in Kinder Haven's care.
